The mission of Higher Order Innovation is to provide the expertise and capabilities for everyone to be innovative in their own way and this webinar will be focused on ways we can work with parents, teachers, and administrators in the Kansas City area to bring the art of innovation to students in Kansas and Missouri. Supporting educational robotic events is where Higher Order Innovation began and we are proud to say that increasing opportunities for STEM education continues to be our primary focus. Witnessing the creativity, exhilaration, and dedication of the student competitors has always renewed our passion for pushing the limits of STEM events.

We will be discussing **educational robotics products** offered by Higher Order Innovation and the **CREATE Open Program robotics competition**. Please see www.higherorderinnovation.com for more information. This will be a live webinar with time to answer questions.
